2 Occupant(s) Interview

Describe engagement activities with the occupant(s) of the proposed project location.

Date:	Occupant Name(s):	
LLD(s):		
Occupant Interview S	ummary:	

Describe any other engagement activities, such as interviews with occupants or landowners adjacent to the proposed project.

Date:	Name(s):	
LLD(s):		
Interview Summary:		

3 **Project Description**

	Provide a description of the project including all proposed work and activities through the life of the project.
_	
	Describe the project schedule including estimated/planned start and completion dates of construction, interim or final reclamation, and anticipated project life. Consider seasonal restrictions (i.e. nesting and breeding breeding birds, unfrozen ground, wet conditions, etc.) when project activities are scheduled.

	List and describe all primary land uses and any previous disturbances located in the project area.
	Explain how the project has been planned to integrate with existing disturbances within the area to minimize the project impact
	Explain how the project has been planned to integrate with existing disturbances within the area to minimize the project impact.
	Explain how the project has been planned to integrate with existing disturbances within the area to minimize the project impact.
_	Explain how the project has been planned to integrate with existing disturbances within the area to minimize the project impact.
	Explain how the project has been planned to integrate with existing disturbances within the area to minimize the project impact.
_	Explain how the project has been planned to integrate with existing disturbances within the area to minimize the project impact.
	Explain how the project has been planned to integrate with existing disturbances within the area to minimize the project impact.
	Explain how the project has been planned to integrate with existing disturbances within the area to minimize the project impact.
	Explain how the project has been planned to integrate with existing disturbances within the area to minimize the project impact.
	Explain how the project has been planned to integrate with existing disturbances within the area to minimize the project impact.
	Explain how the project has been planned to integrate with existing disturbances within the area to minimize the project impact.

4 Environmental Information

_{4.1} Landsca _l	pe
Is the proposed pr	oject location:
☐ YES ☐ NO	Within 150 meters of the Red Deer River Corridor
☐ YES ☐ NO	Within 100 meters of an Environmentally Sensitive Area
☐ YES ☐ NO	Within 100 meters of any other unique or significant feature (e.g. springs, groundwater resources, steep slopes, coulee breaks, unique landscape feature, etc.)
☐ YES ☐ NO	Adjacent to the Hand Hills Ecological Reserve
	yes above, please refer to the Guide to Completion of the Environmental Review oriate measures have been applied.
	osed within the Special Areas Restricted Development Areas or Special Areas will not be approved.
1.2 Soils	
2.1 At the pro	posed project location, classify soils to the subgroup and series level.
2.2 At the pro	posed project location, identify the depth and texture of the topsoil and subsoil.

4.3	Vegetation
4.3.1	Identify the principal plant communities and species within the proposed project location.
4.3.2	Is the proposed project located within a fescue grassland plant community? Yes No
des	by part of the proposed project will impact rough fescue plant communities, a detailed cription of mitigation activities to effectively reduce impacts to the plant community is uired in Section 6.
4.3.3	Is the proposed project location within an area of native vegetation (i.e. native grassland, wetland, etc.)? Yes No
	es, a rare plant survey is required within the proposed project footprint. The project footprint is to be selected to not contain populations of ACIMS tracked plants.

4.3.4	Is the proposed project located within a Endangered or Threatened Plant Range?
	☐ Yes ☐ No
	s, a rare plant survey is required which includes the area of the project footprint plus a buffer 00 meters is required
The plan	project must be located to meet the required setbacks from endangered and threatened ts.
4.3.5	Within the proposed project location, are any weeds listed under the Alberta Weed Control Act located within the development and/or surrounding area?
	☐ Yes ☐ No
	s, a detailed description of mitigation activities to prevent weed infestation of the proposed ect at all stages is required in Section 6.
□ <i>A</i>	 * vegetation communities within the project footprint * locations of identified threatened or endangered plants and/or ACIMS tracked plants shown in relation to the project footprint (if applicable)
	 locations and degree of infestation of the regulated weed species (if applicable)

4.4	Wildlife
4.4.1	Is the proposed project located within any of the following ranges? YES NO Sensitive Raptor Range YES NO Sharp-tailed Grouse Range YES NO Sensitive Amphibian Range YES NO Burrowing Owl Range YES NO Sensitive Snake Range YES NO Ord's Kangaroo Rat Range YES NO Piping Plover Range YES NO Colonial Nesting Bird Range
4.4.2	Using the Fisheries and Wildlife Management Information System (FWMIS) and other relevant sources, have any of the above wildlife species been reported within the area of the proposed project? Yes
	☐ No ildlife survey must be completed for each species either with identified range and/or with a vious FWMIS occurrence as identified above.
hibe	appropriate setback distance from species-at-risk habitat features (nests, dens, leks, ernacula, overwintering & breeding habitat, etc.) for the level of project impact must be ntained.
4.4.3	If the proposed project is located within habitat suitable for any migratory bird species, will any part of the project activities be planned to occur in the season when migratory birds are active? Yes No
	es, a migratory bird nest sweep within 100 meters from the activity location must be within 7 s prior to project commencement within the migratory bird nesting period.
	nest is found during the sweep, approval to commence activities must be obtained from an P Wildlife Biologist.
	Attach a map which identifies locations of habitat features found (if applicable) in relation to the project footprint N/A

4.5	Wetlands and Waterbodies
4.5.1	Is a Water Act Approval required for any work related to the project location or project activities?
	☐ Yes ☐ No
4.5.2	Is the proposed project boundary located outside of the following setbacks:
_ '	wes ☐ NO 45 meters from bank of seasonal (S&K Class III) marshes or shallow open waterbodies? (or 15 meters for pipeline or vehicle crossings)
_ '	res ☐ NO 100 meters from the bank of semi-permanent (S&K Class IV) marshes and shallow open waterbodies and/or permanent (S&K Class V) shallow open waterbodies?
prop	e project is in a location that cannot meet the above policy, identify activities within the bosed project location which could cause negative impacts to the proximal wetlands. A illed description of mitigation activities is required in Section 6.
sea	cial Areas Policy 06-02 prohibits the placement of well center within 100 meters of sonal, semi-permanent and permanent (Class III-V) marshes and/or shallow open

5 Cultural & Historical Resources

5.1	Identify the Historical Resource Value (HRV) of the proposed project location?
-	Not Listed 1 2 3 4 5 proposed project location has an HRV between 1 and 5, a Historical Resources Act eval must be obtained. Is the proposed project located within Wildlife Management Unit (WMU) 200?
	☐ Yes ☐ No
WMU.	cts located within WMU 200 may require First Nations Consultation. Projects located within 200 require project applicants to contact Alberta Municipal Affairs (Corporate Planning and y) to determine if consultation is required.
-	sition applications for project located within WMU 200 must have a no consultation ed letter or consultation adequacy letter issued by Municipal Affairs (Corporate Planning olicy).

6	Project Development & Mitigation Activities
5.1	Describe the potential impacts of the proposed project as outlined in sections 2 & 4. Consider the potential impacts of each project phase.
5.2	Describe the specific measures that will be taken to avoid, reduce, or mitigate the identified potential impacts.

Describe the construction plan including methods chosen to reduce impacts.
Describe how disturbed areas will be reclaimed. Provide specific details for scheduling, erosion control methods, seeding (seed mixes, seed source and quality, seeding methods and rates), fencing, weed control, monitoring and follow up measures

7 Photographs

Attach any applicable photographs, ensuring photographs are properly labelled.
